A STUDY ON FINANCIAL STATEMENT ANALYSIS

¹ETIKALA HARISH GOUD, ²Dr.A.RUPAVENI

¹MBA Student, ²Associate Professor

DEPARTMENT OF MBA, MALLAREDDY UNIVERSITY, HYDERABAD

ABSTRACT: A financial statement (or financial report) is a formal record of the financial activities of a business, person, or other entity. In British English—including United Kingdom company law—a financial statement is often referred to as an account, although the term financial statement is also used, particularly by accountants. For a business enterprise, all the relevant financial information, presented in a structured manner and in a form easy to understand, are called the financial statements. They typically include four basic financial statements: For large corporations, these statements are often complex and may include an extensive set of notes to the financial statements and management discussion and analysis. The notes typically describe each item on the balance sheet, income statement and cash flow statement in further detail. Notes to financial statements are considered an integral part of the financial statements. Purpose of financial statements by business entities "The objective of financial statements is to provide information about the financial position, performance and changes in financial position of an enterprise that is useful to a wide range of users in making economic decisions." Financial statements should be understandable, relevant, reliable and comparable. Reported assets, liabilities and equity are directly related to an organization's financial position. Reported income and expenses are directly related to an organization's financial performance. Financial statements are intended to be understandable by readers who have "a reasonable knowledge of business and economic activities and accounting and who are willing to study the information diligently." Financial statements may be used by users for different purposes.

INTRODUCTION

The performance of the firm can be measured by its financial results, i.e., by its size of earnings Riskiness and profitability are two major factors which jointly determine the value of the concern. Financial decisions which increase risks will decrease the value of the firm and on the other hand, financial decisions which increase the profitability will increase value of the firm. Risk and profitability are two essential ingredients of a business concern. There has been a considerable debate about the ultimate objective of firm performance, whether it is profiting maximization or wealth maximization. It is observed that while considering the firm performance, the profit and wealth maximization are linked and are affected by one-another. A company's financial performance therefore is normally judged by a series of ratios or figures, however there are following the ratio parameters which can be used to know the performance of the company. Financial statements are prepared primarily for decision-making. They play a dominant role in setting the framework of management decisions. But the information provided in the financial statements is not an end in itself as no meaningful conclusions can be drawn from this statement alone. The information provided in the financial statements is of immense use in making decisions through analysis and interpretation of financial statements.

Financial analysis is "the process of identifying the financial strengths and weaknesses of the firm by establishing relationship between the items of the balance sheet and the profit and loss account" there are various methods or techniques used in financial analysis such as

comparative balance sheet statements, trend analysis, common size statements, schedule of changes in working capital, funds flow analysis, cost volume-profit analysis, ratio analysis etc.

The word performance is derived from the word “parfourmen”, which means ‘to do’ ‘to carry out’. It refers the act of performing execution, accomplishment; fulfillment etc., In border sense, performance refers to the accomplishment, fulfillment, etc. The financial performance of a company is usually related to measure the results that is the size of earning riskiness and profitability are two major factors which jointly determine the value of concern financial decisions which increases risk will decreases the value of the firm. A company financial performance can be analyze by the funds and profitability. The Efficiency with which funds are managed gleaned from turnover ratios. Turnover ratio measure how rapidly the assets are being turned over into sales. In other words, they indicate how well the company managers it funds and indicates sales turnover for every rupee of fund the way in which funds are managed can have a significant impact on the profitability of the company. It is an empirical question whether a high value of turnover ratio as a positive influence on the company’s earning capability. A company can have larger sales with a very liberal Credit policy which shrinks the Debtor’s turnover ratio. In this case, the lower Debtors turnover ratio may result in higher profitability. However as for the traditional view, a low value of turnover ratio hits company’s profitability. All three parameters are discussed in detailed along with various other ratios. However, it is to be noted that fundamentally, the balance sheet indicates the financial position of the company as on that point of time. However, profit and loss account are a statement, which is prepared for a particular financial year.

OBJECTIVES OF THE STUDY

The basic purpose of this study is to analyze the Fund management of the various Asset Management Companies (AMC’s) in India.

Keeping this purpose in view, the major objectives of the study are determined as follows:

RESEARCH METHODOLOGY

The objective of the present study can be accomplished by conducting a systematic analysis of the balance sheet of the company. Analysis means detail collection, observation, reporting of data, calculation and finding that are relevant to the company balance sheet. The constitutes is the secondary source of data which includes collection of annual report of the company and many journals.

PRIMARY DATA

Primary data is the first hand data collected for the main and sole purpose of the study, primary data was collected in the finance department of the company with the direct interaction with the officials there.

SECONDARY DATA:

 (Enriching the Research)	Open Access Research Article
	Volume: 23 Issue: 05
	May, 2023

The data which is collected from already existed sources is called secondary data. They are of collecting the appropriate data, which differ considerably in context of money costs, time and other resources. The researcher should keep in mind two types of data viz. Primary and secondary.

- ❖ Text books
- ❖ Web sites
- ❖ Company records

FINDINGS

1. Net working capital and negative for all the three years. So company should thoroughly look into increase the current assets and decreases the current liabilities.
2. The current liabilities more than current assets the working capital is negative
3. A positive working capital means that the company is able to pay off their short-term liabilities.
4. A negative working capital means that the company currently is unable to meet their short-term liabilities with their current assets (cash account receivable, inventory).
5. The company has turned up with a minimum profit in the accordance years 2015-2019 and within the remaining financial years & Over all financial Position is satisfactory.
6. The comparative balance sheet of the co-reveals that during the year 2018, fixed assets increased by RS. 3435.57 Crs. While long term liability from outsiders (loans) has increased by 1184.57 Crs and there is neither increase nor decrease in share capital. The pattern of investment towards Fixed Assets reveals that long term sources of funds are utilized for fixed assets.
7. The percentage of current assets to total assets was increased in 2017. The percentage of current liabilities to total liabilities has also decreased in 2014. Thus the proportion of current assets has decreased by 0.44 % ,whereas decrease in the current liabilities is 2.14 % in the years the company liquidity position is satisfactory.

SUGGESTIONS

1. Company may look into increasing various forms of current assets and decreasing current liabilities to effectively manage working capital requirement.
2. Company may maintain gross profit in and around 22.57% as seen in 2018-19 in the coming financial years.
3. The company has to lookout new joint ventures and assignments.
4. To meet the short-term requirements the company has to raise short term as well as long term loans.
5. To attract to the new customers the company has to adapt new procedures and new technology.

CONCLUSION

The company financial position is good. The company is maintaining standard ratios for implementing activities in their business. This is helpful to the company, is that the study of financial performance is important for the analysis and interpretation of the company. By analyzing the past records of the firm, we are able to understand financial performance. To the financial position by measuring the significance of operating data. The company should increase sales volume as well as gross profit.

Financial performance refers to the treatment of information contained in a way so as to afford a full diagnosis of the profitability and financial position of the firm concerned.
